<https://www.linkedin.com/in/nolan-olhausen-8a0ab3280/>

Full-stack engineer specializing in AI-driven workflow automation, LLM-based agent systems, and scalable backend integrations. Experienced in designing and deploying production-grade systems across enterprise tooling, including multi-agent orchestration, API integrations, and cloud-enabled workflows. Proven ability to lead cross-functional initiatives that improve operational efficiency, reduce manual overhead, and deliver measurable business impact.

EDUCATION

Boise State University — B.S. in Computer Science

PROJECTS

- Game Boy Advance emulator in C, replicating core hardware architecture including a 32-bit ARM CPU, THUMB instruction set, PPU (Pixel Processing Unit), APU (Audio Processing Unit), and multi-tier memory system (8/16/32-bit read/write operations).
- Full-stack Twitter-style social media platform using PHP, JavaScript, HTML, CSS, and MySQL. Implemented core social networking features including posting, engagement systems, authentication, and media handling. Integrated AWS S3 for scalable image storage and retrieval, supporting user-generated content at production scale.
- JavaScript-based Discord bot integrating with a locally hosted Stable Diffusion pipeline, enabling users to generate and receive AI-generated artwork on demand. Delivered an interactive generative AI experience by orchestrating prompt handling, image generation requests, and real-time delivery within chat workflows.
- Automated algorithmic trading bot in Python integrating with the Robinhood API, leveraging multiple strategy models to automate crypto trade execution. Designed for real-time decision automation, market responsiveness, and scalable strategy experimentation.

TECHNOLOGIES

- *Programming languages:* C, C++, C#, Java, JavaScript, Python, PHP, Ruby, Go, SQL
- *Databases:* Microsoft SQL Server, MySQL, PostgreSQL
- *Cloud / Platforms / Tools:* Microsoft Azure (tenant management, security, VMs), AWS (S3), Git, GitHub, Unity, VS Code, Cursor, Xcode, Power Automate, Power BI, n8n, Replit, SharePoint, Windows, Linux

WORK EXPERIENCE

Balance Staffing — Software Developer AI & Innovation (July 2025 - Present)

- Replaced a legacy ticketing workflow (Jira-based) with a streamlined internal system, reducing friction in issue submission and improving team response efficiency through automated routing and standardized intake processes.
- Automated manual workflows improving operational throughput across departments, reducing repetitive administrative work, and enabling teams to focus on client and candidate relations.
- Deployed an AI-powered support assistant that significantly reduced time-to-resolution for internal IT requests by enabling self-service troubleshooting and automated ticket generation.
- Introduced an executive operations platform that improved leadership visibility into organizational priorities, meeting structure, and task tracking, enhancing decision-making speed and alignment.

Dungeons To Your Door — Contract Web Developer (April 2025 - July 2025)

- Delivered a modern, responsive business website that improved customer engagement and strengthened the company's digital presence.
- Reduced friction in customer discovery and interaction by translating business requirements into a streamlined, user-friendly web experience.
- Owned full delivery lifecycle, ensuring rapid iteration based on client feedback and improving overall satisfaction with final product outcomes.

Eagles Brew Coffee — Contract Mobile App Developer (November 2024 - July 2025)

- Increased customer ordering convenience by delivering a mobile ordering experience that simplified purchase flow and reduced reliance on in-store ordering.
- Improved customer retention opportunities through integrated rewards and account features that encouraged repeat engagement.
- Enabled seamless digital payments and order management, modernizing the business's customer service experience.
